

Recycling Made Easy.

Kramer loaders are real experts at recycling. Working in restricted areas the machine's outstanding manoeuvrability will get the job done quickly and safely. Working at height is no problem either with bulk material, bales or loose paper.

kramerALLRAD®

Kramer's recycling experts have arrived.

Recycling options

- Reversing fan
- Industrial radiator
- Front window protective screen
- Protective underbody panels
- Carbon particle filter
- Air conditioning
- Special tyres
- Central lubrication system
- Increased engine and hydraulics output
- Backup warning system
- Wide range of implements

Four-wheel manoeuvrability

Recycling companies often face time and space restrictions in day-to-day work. Kramer machines help to save time and money with their excellent steering angles and tight turning circles.

Power in abundance

Kramer offers an intelligent combination of speed and pushing power. Once the loader drives into a heap of material, speed is reduced and pushing power increased, or vice versa. All fully automatic with no driver intervention.

Stability

The Kramer-specific, rigid one-piece chassis ensures unchanging stability throughout the turning circle – we make intelligent use of this technology to ensure unparalleled stability, safety and performance.

Visibility

KramerAllrad offers the best visibility in its category, both for wheel loaders and telehandlers. Whatever the driving or work situation, the cab without window tie-bars ensures maximum comfort and safety with large glazed surfaces and 360° visibility.
